October 16-20 | San Diego, CA ACS AMERICAN COLLEG

American College of Surgeons Inspiring Quality: Highest Standards, Better Outcomes

The Wayne State Surgical Society (WSSS) met, as usual, on the Tuesday evening of the American College of Surgeons annual meeting, which this year occurred in San Diego. President Scott Davidson (WSU/GS 1990/96) officiated at the meeting and introduced Dr. Donald Weaver (WSUGS 1979), our chairman, who gave an update of the department.

********* 2022 WSSS OFFICERS

President: Larry Narkiewicz (WSU/GS 2004/09) Vice-President: Joseph Sferra (WSUGS 1991) Secretary-Treasurer: Bruce McIntosh (WSU/GS 1989/94) Members-at-Large: Jay Dujon (WSUGS 2011) Robert Holmes (WSUGS 1983) Jennifer Bradley (WSUGS 2015) **Resident Member:**

Dr. Davidson then introduced Dr. David Edelman (WSU/GS 2002/09), our program director, who gave an update on the status of the surgical residents and the interviews that are taking 18-19 place for new residents. Dr. Davidson then introduced each of the finishing surgical residents who identified what their plans are for future training. Each of the faculty members then provide a brief experience of their activities. The presentations were very humorous.

The meeting finished in an upbeat mode with plans to meet again at

the 2023 WSSS Annual Meeting which will be held during the 109th

ACS Clinical Congress next October in Boston, Massachusetts.

SURGICAL GRAND ROUNDS

Dr. Timothy M. Pawlik presented the Surgical Grand Rounds on 10/05/2022 entitled, "Intrahepatic Cholangiocarcinoma (ICCA): Updates on Multi-Modal Treatment." Dr. Pawlik has an outstanding background and has had extensive preparation prior to becoming the Professor and Chair of the Department of Surgery at the Ohio State University (OSU) and Director of the Cancer Research Program at OSU. He began by pointing out that ICCA has an interesting epidemiology with a greater presence in the U.S.A., U.K. and certain countries within Europe. One infec-

Dr. Timothy Pawlik

tious agent that may be associated with the development of ICCA is in flux. He pointed out that there are molecular changes which are currently being studied in order to better understand the somatic mutations associated with the disease.

The symptoms of ICCA are often vague, as is common for lesions which may silently grow in the liver for some time before causing symptoms related to pressure o to jaundice when one of the hepatic ducts becomes involved. Some of the cancer markers are positive in patients with ICCA, including a positive CA 19 in about 50% of patients and a CEA, which is positive in about 25% of patients. He emphasized the importance of an extensive preoperative evaluation to be sure that the ICCA is confined to the liver, since there is a propensity for metastasis to other adjacent organs, distal organs, and bone. He showed multiple images of ICCA and discussed the type of hepatic resection that would need to be performed based upon location. Because the disease is slow to cause symptom, the five-year survival rate is probably no better than 20%. The survival is related to staging, which is similar to the staging for hepatocellular carcinoma (HCC). The staging system for both is related to size, involvement of adjacent organs, involvement of the biliary system, and the presence of regional or distal lymph nodes. There are different classifications of ICCA, depending upon if the histologic pattern appears to be proliferative or inflammatory. He emphasized that patients who have positive lymph nodes have a much worse long-term prognosis. Also when vascular resection is performed for ICCA, the absence of lymph node involvement portends a good prognosis, whereas the presence of lymph node involvement is bad. When the lymph nodes are beyond the porta hepatis, the outcome is very bad. Long-term cure may occur in about 10% of patients, with some of the patients who survive five years having recurrence after that time. He discussed the different types of chemotherapy that are being used in patients with ICCA, including Cisplatin and Gemcitabine. He also described other trials for chemotherapy which are in process.

Following his presentation, there was a very informative and stimulating question-and-answer session.

Continue page 5

SURGICAL GRAND ROUNDS

Dr. Samantha Tarras (WSUGS 2011), Associate Professor of Surgery, presented a Surgical Grand Rounds on 10/12/22 entitled, "Course Correction: The Struggling Learner and Remediation Programs."

Dr. Tarras, who works closely with Dr. David Edelman (WSU/GS 2002/09), our Residency Program Director, chose an interesting and challenging topic when she talked about the struggling

surgical resident. The first issue that she addressed relates to the question as to whether a resident is actually struggling and how one can identify the problem. She described multiple hints, with the obvious one being how the score on the yearly in-training examinations. Other areas include evaluation of how they perform on the individual competencies, which is discussed later. She pointed out that the routine evaluations by the surgical faculty are often a poor guide as to resident performance.

The many surgical competencies include not only the score on their in-training examinations but the rapport that the residents have with their patients, the nursing personnel, their teammates, and the operating room personnel. Often the surgical resident might be tempted to start a History and Physical examination without introducing himself/herself to the patient and identify for the patient their level of training. Many of the things that make up the "doctor" deal with the maturation of a resident, which begins at home prior to school and continues throughout all of the school years until the individual finishes medical school and begins the surgical residency.

Once a problem is identified, who is the most logical person to deal with that problem and communicate with the surgical resident? The obvious answer would be the Program Director, but the Program Director only has so many hours each week and is burdened by many other responsibilities of maintaining the program in compliance with many regulations. This is where other faculty members need to step up to the plate and agree to sit down and discuss problems with the resident who is not meeting expected standards.

One decision, of course, is to fire the resident, but that identifies a program which either made a mistake in taking the resident into the program initially, or has not provided good leadership in order that the resident can appropriately develop. A better way of doing things would be to meet with the resident and identify the problem in order to determine what solutions may be brought about.

SURGICAL GRAND ROUNDS

The word "remediation" sometimes is considered a "dirty word," but this should not be the case. Just as one would approach any problem in a logical manner, remediation should be identified as the process whereby one's mentors would be providing guidelines in order to correct an inadequate performance. Inadequate performance can also be more than maturity and good rapport with patients and teammates, but also may deal with such things as operative skills, cognitive skills, and communication skills.

Dr. Tarras identified a number of programs that have been developed by the American College of Surgeons that discuss simple skills, such as knot tying, to complex skills, such as how to approach an injured vessel in a seriously injured patient, which is provided by the ASSET course. Other programs that have been developed include the Advanced Trauma Life Support (ATLS), which deals with skills as it relates to the injured patient. Cognitive skills can be measured yearly by the in-training examination, and residents can be guided as to how to improve cognitive skills by the SCORE program and the SESAP program, which is put out by the American College of Surgeons. Likewise, cognitive skills can be worked on by individual faculty mentoring, whereby residents are instructed to participate in small group sessions with the educational topics determined by cognitive areas where the resident has demonstrated a poor performance on the yearly in-training examination. During the discussion, it was pointed out that the faculty member has to take the time to do a serious resident evaluation and not just put in statements like, "Needs to read more," when everybody knows that all of us need to read more. Dr. Tarras emphasized how the faculty members are very busy, and it is tempting not to do a very thorough evaluation of the resident which, of course, is detrimental to the resident.

There was a very active question-and-answer session to this vert challenging problem.

Detroit Receiving Hospital Burn Center Reverified by the American College of Surgeons!!

Detroit Receiving Hospital was reverified by the American burn Association on October 10 and 11, 2022. There is a new for reverification; it included a virtual review with the therapist both in patient and out patient areas, nursing virtual review with the nurses involved in burn care, BICU, acute care and burn clinic. There were two burn surgeon reviewers who reviewed our PI, injury prevention, burn survivor outreach, publications and oral presentations, and M&M charts for the entire review year. Below are some of the strengths of the Burn Program.

Dr. Michael White Director, DRH Burn Center

- Dedicated leadership with BMD and TPM.
- D. Pappas retention of nurses.
- Significant support from Burn surgeons and APP.
- Incorporation of EMR in the Burn Clinic streamline their processes.
- ABLS requirement for the ED nurses.
- PM&R resident and attending rounding with DRH Burn patients and is connected through a tunnel.
- Integration of SICU rounder to the BICU.
- Good communication with inpatient therapist to the IPR therapist (RIM).
- Robust injury prevention materials.
- High rate follow-up letters to transferring institution.
- Immediate response of ophthalmology consults with recommendations.
- Improvement in sending therapist to regional conferences.

The following pictures represents the BICU, Burn Clinic, and Burn Program staff. There are so many people involved in the reverification process that are not in the picture, but would like to thank them as well.

Walter O. Evans, MD

Surgeon, Collector, and Preserver of American Art and Letters

Dr. Mallory Williams (WSUGS 2006) desired that the Wayne State Surgical Society family know about the following historical abstract that is to be presented at this year's 134th Annual Session of the Southern Surgical Association, which is being held at the Breakers Resort in Palm Beach, Florida on December 4-7, 2022. This abstract will be presented by Dr. David B. Adams who was raised in Savannah, Georgia and Beaufort, South Carolina.

Dr. Mallory Willian

Walter O. Evans moved with his family to Hartford, Connecticut when he was nine years old. Walter completed his secondary school education in Hartford and did his undergraduate work at Howard University. He graduated from the University of Michigan School of Medicine in 1972 and completed his surgical residency at Wayne State University in 1976. Dr. Evans had always been fascinated by museums and great art, and shortly after he started his surgical practice in Detroit, he began collecting the works of the most notable African American Artists of the century. His collection soon expanded into sculpture, photography, books, letters, historic documents, and manuscripts. After a quarter of a century of surgical practice,

Dr. Walter Evans and his bride, Mrs. Linda Evans

Dr. Evans retired and returned to Savannah. His collection of 20th Century African American art is in the permanent collection of the SCAD Museum of Art in Savannah. Dr. Evans and his wife, Linda, have established the Walter O. Evans Foundation for Art and Literature as a means of ensuring that appreciation of art and literature will be perpetuated. David Blight's Pulitzer Prize-winning biography of Frederick Douglass is dedicated to Walter B. Evans and Linda Evans. After Blight gave a talk in Savannah in 2006, Dr. Evans invited Blight to his home to see a collection Walter thought would interest Blight. Dr. Evans began laying out some carefully rebound scrapbooks on his dining room table with page after page of newspaper clippings, letters, photographs, and personal reminiscences of one of the most famous men in nineteenth century America. These were the Douglass family scrapbooks, carefully assembled, and annotated by Douglass' sons, all but unknown to scholars. This was the inspiration for Dr. Blight's 2018 biography, Frederick Douglass: Prophet of Freedom. The exemplary life of Walter B. Evans should inspire all members of the Southern Surgical Association. His creative collector's eye has identified foundational and iconic American culture. His foresight and generosity underscore the importance of preserving our cultural heritage. Dr. Evans always loved visiting museums as a youth. "The reason I did this was because going into that museum was a game changer for me. It changed my entire life, it not only got me interested in art but literature as well." Dr. Evans has discovered a pathway to balancing the practice of good works in the hospital and good works in the community. Dr. Evans remarked that without museums and art he probably would have been a surgeon anyway, but he says, "I would not have had the rich life that I've led if I hadn't known these artists and their work." Medical University of South Carolina, Charleston, SC, adamsdav@musc.edu

PRODUCTIVITY

Dr. Andrew Isaacson (WSUGS 2017) was a co-author on a paper entitled, "Severity of Traumatic adrenal Injury Does Not Meaningfully Affect Clinical Outcomes," which was published in Emergency Radiology earlier this year. The authors pointed out that there is little data on the clinical signif-

icance regarding the severity of traumatic adrenal injury (TAI) and the Dr. Andrew Issuecton identification as to when patients need some type of intervention. They looked at their experience with TAI from 2009 through 2017. The severity of injuries was assessed radiographically by a contrast-enhanced abdominal computed tomography (CT) of the abdomen and pelvis. They graded the severity of injury from 2 to 3, based upon the American Association for the Surgery of Trauma grading system. They assessed 149 TAI, which occurred in 129 patients. Eight-six patient had low-grade injuries and 43 had high-grade injuries with an abbreviated injury score of 3 or greater. The Injury Severity Score was not statistically different between the two groups. None of the patients required transfusion or laparotomy for control of renal hemorrhage. There was no statistical difference in hospital length-of-stay, ventilator days, morbidity, or mortality between the low-grade injuries and the high-grade injuries. The clinical outcomes were similar for low-grade injuries and high-grade injuries. The authors suggest that, regardless of TAI grade, treatment should be based on clinical assessment and not focused specifically on the adrenal injury.

PRODUCTIVITY

Dr. Catherine Byrd (WSUGS 2025) just finished a two-year research rotation at Stanford University. During that period of time, she was the lead author in three research presentations and published abstracts. These dealt with the characterization of epidural analgesia interruption and associated outcomes after esophagectomy, the outcomes for endoscopic resection vs. esophagectomy in patients

Dr. Catherine Byrd

with low- and high-risk esophageal cancer, and the role of PET/CT in the differentiation between resectable thymomas from anterior mediastinal lymphomas.

During this period of time, she was the first author on seven peer review publications which dealt with the application of three=dimensional printing in surgical oncology, the threedimensional printed model of surgically resectable angio-invasive pulmonary mucormycosis, the role of rule-based semi-automated methods to optimize abstraction for surveillance imaging among patients treated for non-small cell lung cancer, the role of PET and computed tomography in the assessment of anterior mediastinal tumors, a brief overview of thoracic surgery in the United States, innovations of three-dimensional printing for thoracic surgery, and the American Association for Thoracic Surgery summer intern scholarship programs. She is also involved in four manuscripts which are in process, and these deal with robotic slide tracheoplasty for pediatric tracheal stenosis, the three-dimensional printed model of the mediastinum for cardiothoracic surgery resident education, the characterization of epidural analgesia interrupted and associated outcomes after esophagectomy, outcomes for endoscopic resection vs. open esophagectomy with esophageal cancer, and lastly, she has an abstract which is accepted for publication that deals with erector spinae plane blocks for enhanced recovery after esophagectomy.

All of us congratulate Dr. Byrd for her productivity.

COMMERCIAL PROMOTION OPPORTUNITIES

All providers of commercial promotion will receive company name and recognition in the various meeting materials and signage as well as on the DTS website.

Two Day Exhibit: \$2,000

6' table with two chairs for two representatives which includes lunch and snacks Additional company representatives may attend for \$100/each

Single Day Exhibit: \$1.500

6' table with two chairs for two representatives which includes lunch and snacks on Thursday or Friday during the Symposium

Additional company representatives may attend for \$100/each

Dinner Satellite Symposium with Two-Day Booth: \$10.000 (one available) Host a Dinner Satellite Symposium (non-CME) for our attendees on Thursday, November 3, 2022 at the MGM Grand Detroit. Includes exhibitor booth in prime location, four extra company representative badges, two blast emails, link to your company from DTS website. The cost of the meal is not included.

Rib Plating Course with Two-Day Booth: \$10,000 (one available)

Host a Rib Plating (or similar) Course (non-CME) for our attendees on Wednesday, November 2, 2022 at the MGM Grand Detroit. Includes exhibitor booth in prime location, four extra company representative badges, two blast emails, link to your company from DTS website. AV, food and beverage and course supplies costs not included.

EDUCATIONAL GRANT/MARKETING SUPPORT OPPORTUNITIES

Your company can also support the Detroit Trauma Symposium through an unrestricted educational grant in any amount. Educational grants allow us to continue offering outstanding educational programs for our growing meeting attendance. We will recognize your contribution and grant support in all digital communication, as well as on the Detroit Trauma Symposium website. Exhibitor booth fees are separate from educational grants.

CME CREDIT and POLICIES

CME credit will be provided for this activity. Due to requirements for CME credit, all marketing material and booths must be in a different room than meeting room.

MORE INFORMATION

For a complete list of topics and speakers, go to www.DetroitTrauma.org. For more information on how you can support the 70th Annual Detroit Trauma Symposium, please contact Amy Weber at amy@detroittrauma.org or 317-409-0873.

Missing Emails

Over the years the WSU Department of Surgery has lost touch with many of its alumni. If you know the email, address, or phone number of the following WSU Department of Surgery Residency Program graduates please email us at clucas@med.wayne.edu with their information so that we can get them on the distribution list for the WSU Department of Surgery Alumni Monthly Email Report.

Wayne State Surgícal Socíety

The Wayne State Surgical Society (WSSS) was established during the tenure of Dr. Alexander J. Walt as the Chairman of the Department of Surgery. WSSS was designed to create closer contact between the current faculty and residents with the former resident members in order to create a living family of all of the WSU Department of Surgery. The WSSS also supports department activities. Charter/Life Membership in the WSSS is attained by a donation of \$1,000 per year for ten years or \$10,000 prior to ten years. Annual membership is attained by a donation of \$200 per year. WSSS supports a visiting lecturer each fall and co-sponsors the annual reception of the department at the annual meeting of the American College of Surgeons. Dr. Scott Davidson (WSU/GS 1990/96) will pass the baton of presidency to Dr. Larry Narkiewicz (WSU/GS 2004/09) at the WSSS gathering during the American College of Surgeons meeting in October 2022. Members of the WSSS are listed on the next page. Dr. Davidson continues in the hope that all former residents will become lifetime members of the WSSS and participate in the annual sponsored lectureship and the annual reunion at the American College of Surgeons meeting.

OCTOBER 2022

WSU SOM ENDOWMENT

The Wayne State University School of Medicine provides an opportunity for alumni to create endowments in support of their institution and also support the WSSS. For example, if Dr. John Smith wished to create the "Dr. John Smith Endowment Fund", he could donate \$25,000 to the WSU SOM and those funds would be left untouched but, by their present, help with attracting other donations. The interest at the rate of 4% per year (\$1000) could be directed to the WSSS on an annual basis to help the WSSS continue its commitment to improving the education of surgical residents. Anyone who desires to have this type of named endowment established with the interest of that endowment supporting the WSSS should contact Ms. Lori Robitaille at the WSU SOM> She can be reached by email at Irobitai@med.wayne.edu.
